

SGISfarm Template Library

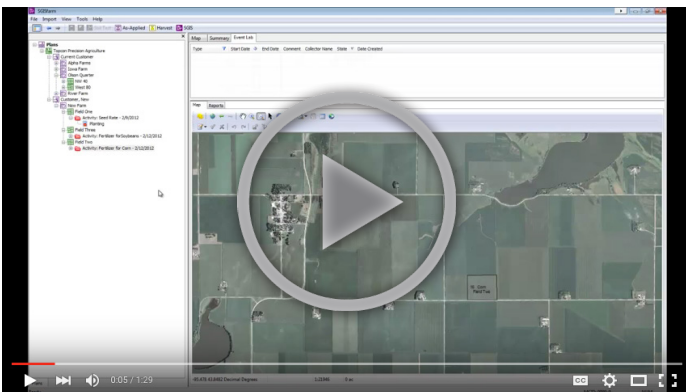

SGIS Farm Disclaimer for Templates

Templates in this library are provided as a convenience for the user and with the intent to improve the agro-nomic efficacy for the application of fertilizers by users of the SGIS Farm software and practitioners of Variable Rate Application methods. These templates provide a simplified format to help users manipulate inputted data to create an agronomic recommendation based upon a “management zone” approach and other published agro-nomic methods and principles found in the public domain. The manufacturer supports an open architecture format and welcomes the opportunity to include additional research and methods as they become published and known within the public domain.

Links to these sites and other references are provided only in the spirit of improving “ease of use” of the SGIS Farm product and **does not imply an agronomic recommendation nor endorsement of the agronomic science, authors or their institutions.** Users are responsible for the agronomic validity of the prescriptions and application controller maps that they create with the help of this software. All fertilizer prescription and application should be done by a licensed professional, where such licensing and regulations are applicable.

For instructions on implementing these templates in SGIS Farm please review the following video here:
